BJMP VAQS Complete Process Flowchart

Simple end-to-end process for records setup, visitor registration, ID issuance, queue admission, monitoring, reports, and governance.

Daily controls: one visitor ID = one visit per day, maximum ten visitors inside, visitor board resets daily.

Process notes: PDL records are grouped by PDL gender. Visitor Management and Reports use linked PDL gender for gender tabs/filters. Deleting or editing key records is archived for traceability.

Security notes: public board hides completed records and operational averages; action buttons require role-based permission approval.
